

SteelPac RCS

For the Creation, Management and Issuing of Reinforcement Bar Bending Schedules

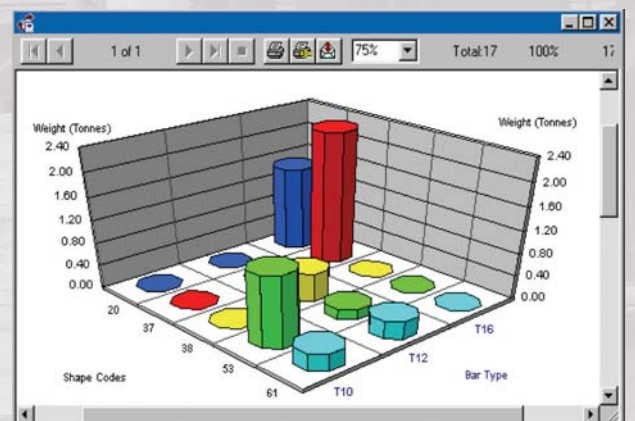

SteelPac RCS is a powerful Schedule management tool that facilitates the fast and accurate creation, checking management and issuing of reinforcement schedules. A certified database system enabling grouped analysis of rebar data across entire contracts no matter where the schedules were sourced from. SteelPac RCS frees your team from endless calculation, integrating seamlessly with schedules created in CAD, or allowing individuals to key data directly and then issue to the construction teams.

Why SteelPac RCS ?

- Comprehensive Revision Management with comparison functionality
- Schedules issued across the complete supply chain by e-mail in seconds
- Automatic production of issue sheets for entire contracts at the push of a button
- Central Document Register to monitor and control your ongoing design process
- Full compatibility with today's requirements for the contractor and his supplier
- Data stored and archived locally or on your network with multiple user access
- Huge time and paper savings with the seamless transfer to your build partners
- Fast keying of schedule produced in a Windows format
- Compatible with all RC Detailing software
- Instantaneous validation to prevailing local Standards eg. BS8666 (2000 & 2005) or BS 4466 in UK
- Weights for individual schedules or entire contracts available on screen at all times
- Join the SteelPac E-Rebar Supply chain

SteelPac RCS- Key Features

Schedule creation

- Intuitive fast keying for those wishing to key their own schedules
- Auto validation to the relevant local Standard as bar marks are created (eg. BS4466 and BS8666 (2000 & 2005) in the UK)
- Auto-calculation of bar lengths and weights
- Bar's 'inserted', 'deleted', and 'marked as deleted' whenever necessary
- Schedules revised and re-validated quickly

Schedule Management and Issuing

- Files imported into SteelPac RC from all RC detailing packages including SteelPac RCD, CADS RC, ARUP (CADrebar), Prokon (PADDS), CADDET, Master Series, TechnoCAD (Rebar Mate), SuperCAD-RC, GEOPAK Rebar, MultiREBAR and Autograph (RebarIT).
- Instantaneous validation as the file is imported to prevailing local standards (eg. BS4466 AND BS8666 (2000 & 2005) in the UK)
- Central document register with multiple access across networks
- Issue sheets automatically created and issued in Windows format
- Schedules can be issued in seconds via e-mail or collaboration tool to all supply chain partners thus eliminating paper flow between the design team
- No need for scanning and faxing, therefore eradicating risks associated with unclear or illegible documents
- Contains a powerful interrogation engine which can produce a variety of useful reports

Schedule History and Checking

- Maintains a complete history of all schedules and their revisions down to bar mark level
- ADVANCED REVISION CHECKING when importing multiple revisions of the same schedule giving an instant comparison
- Powerful interrogation tool to compare schedules and revisions at bar mark level across an entire contract in seconds
- Revision register holds copies of all revisions for quick and clear comparison
